

DEDICATION TO QUALITY MANUFACTURING AND INNOVATIVE DESIGN

DIAMOND RAIL MONORAIL SYSTEM BENEFITS

- ❖ As opposed to handling the cables & hose, equipment handling is limited to a monorail beam.
- ❖ Face and reticulation cables and hoses are incorporated into the system, thereby eliminating the need to manually handle, recover and relocate.
- ❖ The utilisation of shuttle cars for retracting face cables and hoses during is eliminated.
- ❖ Owing to the orderly and contained management of services, the risk of damages to services is dramatically reduced. Hoses remain on the system, subsequently, no raising, lowering, or transporting to a new location at the face.
- ❖ Reduction in equipment damage equates to direct increases in production rates, owing to minimisation of down-time. Additionally, hoses and cables will no longer be damaged as a result of miner collisions which may occur.
